## webv:Repeated Library name in Titles list after remote search

- **Article Type:** General
  - **Product:** Voyager
  - **Product Version:** 8.1.1
- 

### Description:

Bug Report Form for Issue 16384-7202

Module(s): WebVoyage

Server platform(s) affected: Solaris

Browser & version (if applicable): IE 7, FF2

Release(s) replicated in: Voy 7.1.0

Last version without bug (if applicable): 6.5.4

### Expected results:

Titles list after remote search should show the database name once per title.

### Actual results:

Titles list after remote search displays the database 3 times per title.

Workflow implications: The database name pulls from two different places (SysAdmin and webvoyage.properties), thus making the results confusing to patrons.

### Replication steps:

1. On the basic search page, select Change next to database name.
2. Select at least one remote database to search.
3. Perform search.
4. Results list will display Database name 3 times in addition to the columns selected for the search results in SysAdmin.

For example, where the results are set to display Full Title, Author and Format, a title in the Remote Search results displays:

Full Title

Author

Database NAME as entered in SysAdmin>Search>Database Definitions>Name

Bib Format (doesn't always work: see related issue 16384-7153)

Call number, Database NAME set in webvoyage.properties

item status, Locaton

Database NAME set in webvoyage.properties

Other information: The above happens even when displaying a result from the local database in the case of a Simul Search. Performing the same search in the local database only displays the following in results:

Full Title

Author

Bib Format

Call Number

Item Status, Location

Resolution:

Fixed in Circulation and OPAC for 8.1.1.
