-

Question

How should the messages resulting from a re-run of the "3. Run upgrade express" step, such as:

```
A_WARNING: The file /exlibris/aleph/u21_1/xxx00/tab/tab_patron_log.eng already exists!  
or
```

```
A_WARNING: The table z304 in usr00 has already been upgraded.
```

be handled?

Answer

These messages can be ignored. (The alternative is to restore the pre-upgrade versions of the files/tables in order to avoid the messages.)
