Description:

After running Upgrade Express v16-v18, I am trying to use sqlplus like "s+ abc01" but it is not working:

ERROR:

ORA-01045: user ABC01 lacks CREATE SESSION privilege; logon denied

Is that not going to work until the upgrade is finished?

I *can* do "s+ usm01".

Resolution:

Checking with util f/4, I see that data has been loaded for abc01, abc50, etc.

The create_ora_user procedure for abc01 should have included the CREATE SESSION privilege. Could someone there have changed it?

I assume that, since the data is loaded, you don't want to rerun create_ora_user (which wipes out all the tables).

You can do this:

```
> sqlplus system/[system_password]
SQL> ALTER USER ABCnn PROFILE ALEPH_PROFILE;
SQL> GRANT ALEPH_LIBRARY TO ABCnn;
SQL> exit
```

Note: The default Oracle password for user "system" is "manager". But, you can also run this as ALEPH_DBA user.
