
Error with renorm.exe during Voyager 7.2.0 upgrade

- **Article Type:** General
 - **Product:** Voyager
 - **Product Version:** 7.2.0
-

Description:

Bug Report Form for Issue 16384-11090

Module(s): renorm.exe

Server platform(s) affected: All

PC OS (if applicable): N/A

Browser & version (if applicable): N/A

Release(s) replicated in: 2007.2.0

Last version without bug (if applicable): N/A

Expected results:

elink_index.link_text_normal record lengths of up to 1024 bytes should be processed, since that column is defined as varchar(1024) in the database schema

Actual results:

renorm.exe gives memory error when processing elink_index.link_text_normal value of length > 1000.

Source code inspection of renorm shows that there are several points in the code where a fixed-length buffer of 1000 bytes is declared.

Workflow implications: renorm.exe fails for large records

Replication steps: Execute with elink_index.link_text_normal data of greater than 1000 bytes

Resolution:
