## missing ALEPH sublibrary in local patron information

- **Article Type:** Q&A
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Question

In the Local Patron Information the ALEPH line which was there in versions before Aleph 18 is missing. Where has it gone?

### Answer

There was a change of functionality in version 18. The ALEPH patron level record is no longer created automatically and is now required only by multi-ADM sites that implement Patron Direct Queue (PDQ) or that want to enable cross-ADM circulation without requiring patrons to register at every library.

### Additional Information

If you still want this ALEPH record to be created, you may define so by setting column 22 of `./xxx50/tab/tab31` to Y.

**Category:** Circulation (500)
