Question

- * when launching the hold-req X-service, the z37-end-request-date is set 1 year ahead
- * for OPAC the variable is set to +6 months

```
$alephe_root/www_server.conf  
setenv www_z37_date_to M006
```

Is it possible to change the X-services to 6 months?

Answer

In X-Service Hold Request (hold-req), the z37-end-request-date is set to one year from the current date. This is hardcoded and cannot be changed.

Category: X-server (500)
