
p_print_03: "F10: File name must exist "

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 17.01
-

Description:

In v 15 we were successfully running p_ret_01 and p_print_03 in the job_list for PLN60. This process was used to create a new titles list for the libraries.

We have successfully run the programs using the GUI Services in PLN60. However, when we reactivated the jobs in the job_list, p_print_03 failed. The error message is

Param Errors Found:

F10: File name must exist.

Param Initialization Failure, Exiting !!!

The file created from the pln60_p_ret_01 is in the alephe_scratch directory as is defined in the HELP for p_print_03 in the GUI. I tried to add the full path to the job_list and this failed.

What do I do?

Resolution:

These setenv's (from the job log) show that the parameters are incorrect. The file_out value of "new_titles_daily" is in the p_file_format position:

```
setenv p_active_library "PLN60"  
setenv p_file_in "/exlibris/aleph/u17_1/alephe/scratch/new_holdings_daily"  
setenv p_buf_code_1 "ENG"  
setenv p_buf_code_2 "008"  
setenv p_buf_code_3 "LKR"  
setenv p_buf_code_4 "852#"  
setenv p_buf_code_5 ""  
setenv p_buf_code_6 ""  
setenv p_buf_code_7 ""  
setenv p_buf_code_8 ""  
setenv p_file_out ""  
setenv p_file_format "new_titles_daily"  
setenv p_fix_routine "A"
```

...

You have:

PLN60,/exlibris/aleph/u17_1/alephe/scratch/new_holdings_daily,ENG,008,LKR,852#,,,,,,new_titles_daily,A,,,N,

You need to remove one of the commas between the 852# and "new_titles_daily".

Additional Information

p_ret_01, p_print_03, job_list
