
Importing Demo Libraries - ALEPH/Oracle up or down?

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 18.01

Description:

In our version 18 instance, we have done the upgrade of our Oracle 9i data to Oracle 10.

The next step is to import your demo libraries. I need to know what state things should be in - should Oracle be up or down; should Aleph be up or down?

Resolution:

Oracle needs to be up. It's probably better to have ALEPH down -- because of the possible VIR01 problem described in SKB 8192-1433.
