

Getting email alerts regarding disk space, Oracle errors, etc.

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 15.2
-

Description:

I am wondering if there are shell scripts available for alerts regarding the disk space, table space, oracle important errors...

Resolution:

Ex Libris briefly included scripts to do this (in version 18), but it was decided that this is better left to the various products which perform this function, such as Nagios.
