

p_item_01: How to generate a shelf report number

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
-

Description:

We would like to test the new inventory processes that are in Version 17 (item-01, item-08, item-09, and item-10). In running item-01, inventory definition, we noticed that our system is not assigning a shelf report number to the items. Please provide instructions on how to set up the system to generate this number.

Resolution:

The Z30-SHELF-REPORT-NUMBER (new in version 17) is assigned by p_item_01, using the xxx50 z52 (util g/2) last-shelf-rpt-num counter. If there is no last-shelf-rpt-num parameter, then no Z30-SHELF-REPORT-NUMBER is assigned.

Once a Z30-SHELF-REPORT-NUMBER has been assigned to items, then that number can be used in running the p_item_09 (Inventory Summary) and p_item10 (Inventory Report).

There is also a Z30-LAST-SHELF-REPORT-DATE. This is written by p_item_01, p_item_04, and p_item_05, but is just informational and is not used by the system in any special way.
