
How to parse item description

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

We set parse_desc_niso_8 in xxx50/tab/tab_label_parse. However the z30_description on the label does not split.

Resolution:

To see the description field splitted, please add the following lines to the item-copy-label-nn.xsl and/or item-issue-label-nn.xsl templates:

```
<xsl:call-template name="generic-line">
<xsl:with-param name="line" select="/item-desc-piece-01"/>
<xsl:with-param name="width" select="30%"/>
</xsl:call-template>
<xsl:call-template name="generic-line">
<xsl:with-param name="line" select="/item-desc-piece-02"/>
<xsl:with-param name="width" select="30%"/>
</xsl:call-template>
etc.
```

Then run UTIL-I-6, close and reopen the GUI.

Additional Information

label printing, z30_description, tab_label_parse
