
SLNP: Removal of suffix SL when printing z416-group-qualifier

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

We are using SLNP ILL and want to print out the requester reference number of lending requests on several printouts. In Aleph this number is stored in z416-group-qualifier but always with additional suffix SL. How can we print the reference number without suffix SL?

Resolution:

In the relevant xsl-template (e.g. ill-print-lend-request-00.xsl) change this line

```
<xsl:with-param name="value" select="/z416-group-qualifier"/>  
to  
<xsl:with-param name="value" select="translate(/z416-group-qualifier,' SL','')" />
```

Then during print out the suffix SL will be removed.
