  - **Product Version:** 16.02
- 

### Description:

p\_manage\_12 -- when should it be run?

### Resolution:

p\_manage\_12 should not be in any routine re-indexing sequence..

(The "How To Run Index Jobs" includes it as a possible need and discusses, in the Notes, the circumstances in which it might be done, but I want to emphasize that this should be the exception.).

Depending on the parameters and the circumstances, running p\_manage\_12 in one library could necessitate running it in all the BIB libraries, all the ADM, all the Course Reserve, and all the HOL libraries..

I will update "How To Run Index Jobs" to give a clearer warning about this.
