## Metalib ISSN/ISBN doesn't work connecting to ALEPH server.

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 16.02
- 

### Description:

Metalib ISSN/ISBN doesn't work connecting to ALEPH server. Why?

### Resolution:

The problem may be the name of the ISSN or ISBN index: "020" or "IBN" (rather than "ISBN") and "022" or "ISN" (rather than "ISSN"). Metalib can be configured to accommodate this.
