

Changing "Brief View" in www_const.eng is not reflected in UI

- **Article Type:** General
- **Product:** MetaLib
- **Product Version:** 4

Description:

One of our libraries would like to customize the Brief View display text using /ins01/tab/www_const.eng but were unsuccessful.

They have changed "Brief View -- Brief View" to "Brief View -- "Descriptive List" [start_w, start_s], but the change isn't reflected in the UI.

Workflow:

1. Cleared utf files in /exlibris/metalib/m4_2/utf_files/ins01/tab/www_const.eng
2. Updated /exlibris/metalib/m4_2/ins01/tab/: was: "Brief View -- Brief View" - I changed it to: "Brief View -- Descriptive List"
3. Ran start_w and start_s
4. Logged into the /V and did a simple quicksearch in the "Science" but the change isn't reflected in the UI.

QUESTION: Which of the following "brief view" labels should we be changing in www_const.eng to make the text on any/all of their brief views say "Descriptive List" instead of "Brief View"?:

Brief View -- Brief View

eShelf Folder Brief View -- MyFolders Brief View

MetaSearch Brief View -- CustomSearch Brief View

QuickSearch Brief View -- QuickSearch Brief View

Resolution:

It looks like when you upgraded to v4, you didn't re-customize the newer version of the www_const.eng file.

Consequently, there are several missing sections in the current ins01/tab/www_const.eng file.

If you do a 'diff' between the currently active file and the standard file from ins01/tab/ you can see the missing sections:

```
> v_first -- &lt;&lt;
> v_first_dim -- <span class="fade">&lt;&lt;</span>
> v_last -- &gt;&gt;
> v_last_dim -- <span class="fade">&gt;&gt;</span>
> v_next -- Next&gt;
> v_next_dim -- <span class="fade">Next&gt;</span>
> v_prev -- &lt;&lt;Previous
> v_prev_dim -- <span class="fade">&lt;&lt;Previous</span>
> text_table -- Table View
> text_brief -- Brief View
> text_full -- Full View
> v_new_name -- Clipboard
> v_new_desc -- This group contains the resources that were recently added to a new group
> text_original -- Original
> text_converted -- Converted
> text_category -- Category
> text_subcategory -- Subcategory
```

- > direction -- right
- > ! Cluster/Facet
- > TOPICS -- Topics
- > DATES -- Dates
- > AUTHORS -- Authors
- > JOURNAL TITLES -- Journal Titles
- > SUBJECTS -- Subjects
- > DATABASES -- Databases
- > After -- After
- > Before -- Before

In order to correct this I suggest that you copy the `www_const.eng` file from `ins01/tab/` and replace the current file.

Be sure to create a backup of the current `www_const.eng` file before you copy any files over from `ins01/tab/`.

If you've done other customization of the current file - you'll need to add those customizations to the newer `www_const.eng` file once you've moved it into the `insco/tab/` directory.

Of course, once you establish the file, the "Brief View " text will be displayed again in place of the code "text_brief".

So, getting back to the original question, you'll need to change the following text of the `www_const.eng` that you copy over from `ins01/tab/`:

From: "text_brief -- Brief View"

To: "text_brief -- Descriptive List"

Be sure to re-start your web server once the updates are complete.
