

## Items with bank arrival dates

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

One of our catalogers has noticed that we have a lot of item records with an arrival date of '00000000'. What would cause a record to end up with such an arrival date rather than a more appropriate value? Shouldn't all records receive a proper arrival date?

### Resolution:

Typically serial items that have not yet arrived have this null date; otherwise this field is not populated for monographs.
