
Direct URL link to My Account

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

We are redesigning our library site and would like to add a direct link to "My Account" on our home page. I am having some trouble setting up this up.

Resolution:

You want to use something like this:

http://alephsvr.xxxxx.edu:8991/F/?func=login-session&bor_library=ABC50

This will get the patron to a sign-on page. If you wanted them to be able to enter login and password on your home page and pass it to Aleph, you might want something like this:

http://alephsvr.xxxxx.edu:8991/F/?func=login-session&login_source=LOGIN_BOR&bor_id=<their login>&bor_verification=<their PIN>&bor_library=ABC50

In this second URL, you would replace the angle brackets and what's inside ("**<their login>**" and "**<their PIN>**") with the login and password that they enter in your web form, so it might end up looking like this for John Doe:

http://alephsvr.xxxxx.edu:8991/F/?func=login-session&login_source=LOGIN_BOR&bor_id=jdoe&bor_verification=9876543210&bor_library=ABC50
