## mfdkeysrv:HKEY via Boolean keyword yields less than the Holdings Boolean

- **Article Type:** General
  - **Product:** Voyager
  - **Product Version:** 7.0.1
- 

### Description:

Issue 16384-9953

Module: mfdkeysrv

Release(s) replicated in: 6.5.4- 7.2.0

Server Platform(s) affected: All

Expected Results: A HKEY search via the Boolean keyword or Holdings Boolean should return all results.

Actual Results: A HKEY search via the Boolean keyword search yields less than the Holdings Boolean search.

Workflow implications: Inability to find all relevant records.

### Replication steps:

In any of the staff modules with search (Acq, Cat, Circ), retrieve the search grid and click on the Keyword tab

Do a Boolean keyword search for

hkey main and (hkey h or hkey h1)

Then do a Holdings Boolean search for

main and (h or h1)

The Boolean search will yield less than the Holdings Boolean, they should retrieve the same hits since they are the same search.

### Please also note:

In the search performed above there are no multiple holdings records.

### Resolution:

---
