-

Desired Outcome Goal:

Prevent creation of z00p / sending of record to Primo by adding STA \$\$aSuppressed field to bib record for ADM's with only items which are not supposed to display in OPAC.

Procedure:

1. Run the following SQL to produce a file of doc numbers of ADM records which have only items which are not supposed to display in OPAC:

```
> s+ xxx50
```

```
set echo off  
set pause off  
set term off  
set show off  
set verify off  
set heading off  
set feed off
```

```
spool suppstatus.lst
```

```
select substr (z30_rec_key,1,9) from z30 minus select substr (z30_rec_key,1,9) where z30_item_process_status not in ('WD','MI');
```

```
spool off;
```

(Modify the list of item processing status codes as desired.)

2. Append your "XXX50" ADM library code to suppstatus.lst lines, as described in KB 8192-1591 (Appending library to each line in file of record numbers).

3. Run manage-70 (Retrieve Record Keys) in xxx50, using file from step 2 as input, specifying Conversion Type "ADM-TO-BIB", to create a file of the bib record numbers for these ADM's.

4. Run manage-21 (Global Changes) in xxx01, with the file produced by step 3 as input, to add an "STA \$\$aSuppressed" field to each record.
