Description:

How can we tell what tables use a particular database file?

This error was generated from our backup this weekend:

RMAN-03009: failure of backup command on ORA_DISK_1 channel at 11/15/2010 00:50:11

ORA-19566: exceeded limit of 0 corrupt blocks for file /ora01/oradata/aleph1/aleph1_ts4d_16.dbf

Our university DBAs are looking into this issue. Can you tell us what functions might be affected by this file?

Resolution:

All of the tables in the tablespace to which the file belongs can/will be using the file.

Doing util a/17/10/2 to generate a merged file_list for each library, I find these tables using tablespace TS4D:

[libprddb1.lib.abc.edu](#)-18(1) ABC01-ALEPH>>grep TS4D file_list

```
TAB z01 200M 0K TS4D
TAB z02 200M 0K TS4D
TAB z91 200M 0K TS4D
TAB z95 200M 0K TS4D
TAB z98 200M 0K TS4D
TAB z00 200M 0K TS4D
```

[libprddb1.lib.abc.edu](#)-18(1) ABC50-ALEPH>>grep TS4D file_list

```
TAB z30 200M 0K TS4D
```

[libprddb1.lib.abc.edu](#)-18(1) ABC10-ALEPH>>grep TS4D file_list

```
TAB z01 200M 0K TS4D
TAB z02 200M 0K TS4D
TAB z95 200M 0K TS4D
TAB z98 200M 0K TS4D
```

(The abc60 and abc30 library tables don't use TS4D.)
