
Log file appears in \$alephe_scratch with imbedded spaces in name

- **Article Type:** General

Description:

Specifying a log name + full path for the clear_vir01 job_list entry, as described in KB 16384-4178, the job runs, but the \$alephe_scratch log file name contains spaces:

```
log_clear_vir_24499
```

I couldn't open the log file because of the blanks so instead I opened it by typing "log_clear_vir*". Any idea why it's creating the odd log file name?

Resolution:

Looking at \$alephe_tab/job_list, I see this:

```
W0 04:01:00 N log_clear_vir\240 \240 \240 \240 csh -f /exlibris/aleph/a19_1/aleph/proc/clear_vir01 VIR01
```

Looking at the job_list entry with putty, I see these "\240"s. Site didn't see them with pico, but deleted the spaces in between log_clear_vir and csh -f and put new blanks. And restarted the job daemon.

After that, the log file appeared normally in \$alephe_scratch.
