
Is it possible to reindex TS2D files?

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 17.01

Description:

The TS2X ran out of space about a week ago. I have a library that wants to know if I can retrieve the log file data that was not indexed while TS2X was out of space and, therefore, is not being retrieved for the order log.

Resolution:

The TS2X tablespace contains Oracle indexes. You can rebuild any Oracle index using util *a/17/3*.

The order log table is the Z71. At a minimum, you would want to do that, but I would recommend doing util *a/17/3* for **all** of the Oracle indexes in this tablespace.
