## p\_union\_02: ORA-01555: snapshot too old

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 16.02
- 

### Description:

p\_union\_02 stops with the following error:

Oracle error: fetch z120

ORA-01555: snapshot too old: rollback segment number 6 with name "\_SYS  
21864 END READING AT 00:23:18

### Resolution:

Correct the "snapshot too old" problem as described in KB 8192-2519, then re-run p\_union\_01 and p\_union\_02.

Note: it might seem that one could use the "From Document Number" parameter to skip records which have already been processed, but p\_union\_02 does not process the records strictly sequentially and the following SQL shows that, in fact, record 350150 has not been processed:

```
odn01@ALEPH0> select min (z120_rec_key) from z120 where z120_update_flag = 'N';  
**** Hit return to continue ****
```

```
MIN(Z120_  
-----  
000350150
```

This record is less than 10% of the way into the database. Therefore, it is cleaner and better to just start over.
