
Are Z36H and Z37H needed?

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 17.01
-

Description:

ALEPH has the following parameters in tab100:

CREATE-Z36H= Y or N

CREATE-Z37H= Y or N

Do we need these tables?

Resolution:

A setting of "N" can prevent you and Ex Libris from being able to diagnose problems with loans and hold requests. We strongly recommend "Y".

If you are concerned about the space which these files might take, you can limit them to the most recent year, by periodically, using SQL, deleting those older than a year.
