
No ORACLE connection" in p_manage_37 log

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

- p_manage_37 was run in ABC60. The job failed with the error:

Oracle error: update_cursor1 z00r
ORA-03114: not connected to ORACLE
No ORACLE connection - process is terminated

- I've checked ORACLE status: it's running.

Resolution:

abc60 had create_z00r = Y in its tab100 when no z00r table was defined.

After changing tab100 to "create_z00r = N", the problem is not occurring.
