
Default date field (when not displayed) is the current date

- **Article Type:** General
 - **Product:** Primo
 - **Product Version:** 3
-

Description:

When placing a hold request in OvP, if the last interest date field is displayed – the hold request date receives the Aleph default date for that item.

However, when the field is not displayed, the hold request is by default the current date.

Resolution:

This is fixed in SP 3.0.2.

In the meantime, the workaround is to have the last interest date field display – in In Back Office, under Advanced Configuration > All Mapping Tables > Table: Hold Optional Request Parameters

last_interest_date Display: Yes

Save and Deploy

Additional Information

hold, request, ovp, interest date
