## \$alephe\_root/aleph\_start.tml missing

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 19.01
- 

### Description:

The Verde-Aleph Interoperability document says that I have to add lines to \$alephe\_root/aleph\_start.tml. I do not find this file in alephe\_root. How might I get this added?

"Configure Aleph so that it points to your Verde server. In the \$alephe\_root/ aleph\_start and \$alephe\_root/aleph\_start.tml files, enter the following:

setenv verde\_base\_url <http://servername:port/verde/web/askVerde.do>" (p.39)

### Resolution:

aleph\_start.tml is a template used only at the time of initial ALEPH implementation. You only need to add the setenv line to your aleph\_start (or aleph\_start.private) file.

The Verde-Aleph Interoperability document is being changed to remove reference to aleph\_start.tml
