

## Cannot "Add ID", Button Disabled

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 21
- 

### Description:

Why is the "Add ID" button grayed out, disabling it, in the Patron record, [T] Additional IDs node?

Also, nothing displays in the Additional IDs top right pane -- neither the 00 id qnor the 01 id are showing there even though they can be viewed via the Global Patron Information node.

### Resolution:

tab100 : USER-IDS-PERMISSION was set to 1, but there were no Z305 records yet (local patron information).

Changing it to 0 enables the Add ID button for now.

Evaluate the expected workflow and library setup to select the correct setting for this variable in the long term.

tab100

USER-IDS-PERMISSION

0 = No Check - Can view/update user IDS

1 = Can view/update user IDS only if the user has ADM or other Z305 records (an ALEPH level record is not sufficient)

2 = Can view/update user IDS only if the user has Z305 records other than the ADM level record.

4 = Can view/update user IDS only if there is a Z305 record for the user that matches the operator's sublibrary/library permission . This option is relevant for installations that share a common Z305 table, permission is allowed because the user has registered at the library.
