
How to Export Holdings, Circulation, and Acquisition Data

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 21
-

Desired Outcome Goal:

How can Holdings, Circulation, and Acquisition data be exported?

Procedure:

A. Holdings data (xxx60 HOL record) options:

1. Run Download Machine-Readable Records (print-03) in xxx60 (HOL) library, specifying MARC output, to produce MARC-format holdings records.

The LKR field shows the linked Aleph bibliographic record number.

2. As described in KB # 8192-9831 (Exporting bib records with holdings), run print-03 in the xxx01 (BIB) library, specifying MARC-format output, with

PRINT-REC expand_doc_bib_hol_usm

in tab_expand. This causes the holdings fields to be included in the exported bibliographic record.

B. Acq and Circ data can be exported as sequential files. Options:

1. Run Export Database Tables (file-03) for each of the tables

2. Export *ALL* the xxx50 (ADM) library tables via util a/19 (Export library)

Additional Information

* Acquisitions tables are listed in KB # 16384-24881 (What Oracle tables does the Acquisitions module use?)

* Circulation tables are listed in KB # 16384-24883 (What Oracle tables does the Circulation module use?)

* Consult KB # 4138 (Which tables are index, temporary, and base tables?) to check which tables can be reconstructed from other tables
