

How to Run UTIL T 2 (Re-index database)

- **Article Type:** General
 - **Product:** MetaLib
 - **Product Version:** 4
-

Description:

What steps should be taken in order to run UTIL-T-2 correctly?

Resolution:

```
dlib dat01
stop_w
util t 2 ["Re-index database"]
start_w
```

However, in general, don't reindex dat01 unless told to by Support.

It locks the library for from about 30 minutes up to several hours.

While it is running, the following message will display in /M:

The Information Resource Database is being indexed. No actions are allowed until the indexing process is complete. Please try again in a few minutes.
