
Upgrade Express: "./ext01/tab/job_list is in a demo library"

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

We see these messages in Upgrade Express step 5:

```
A_WARNING: /ealeph/aleph/a18_1/ext01/tab/job_list is in a demo library.
```

```
A_WARNING: /ealeph/aleph/a18_1/vir01/tab/job_list is in a demo library.
```

./a18_1/ext01/tab/path_convert has this as its final line:

```
$ext01_dev/ext01/tab/ill_format_type $usm40_dev/usm40/tab/ill_format_type
```

Shouldn't this be:

```
$ext01_dev/ext01/tab/ill_format_type $usm01_dev/usm01/ill_format_type
```

Resolution:

In the case of vir01 and ext01 these warnings can be ignored. (path_convert-ing them to usm01 is correct.)

As described in KB 8192-3387, you (probably) do not want to have one of your abcxx libraries being path_convert-ed to usmxx.

You should not have to worry about vir01 or ext01. These are Ex Libris-controlled libraries which are in the a-tree.

The lines you show for vir01 path_convert are what I find in the vir01 path_convert on our server, so that is fine.

The last line for the ext01 path_convert on our server is:

```
$ext01_dev/ext01/tab/ill_format_type $usm40_dev/usm40/tab/ill_format_type
```

As you note, the ext01/tab has an ill_format_type -- but because of the path_convert the usm40/tab/ill_format_type will be used instead. I will ask our staff to clear up this inconsistency (by deleting the ext01 tab/ill_format_type).

Anyway, I think you should leave the last line of the ext01 path_convert as:

```
$ext01_dev/ext01/tab/ill_format_type $usm40_dev/usm40/tab/ill_format_type
```
