Description:

Toward the end of our production upgrade from v.16.02 to v.18.01, we plan to run the complete set of indexing jobs in xxx10 Authority library (manage 05, 02, 07, 27,01,17, and 105). Our question is: having run all these jobs in xxx10, is it necessary for us to run any jobs in xxx01 Bib library other than stopping and restarting UE_08?

Also, if we are going to run p_manage_05 and p_manage_01 in xxx01, then which ones should be done first, the complete set of indexing jobs in xxx10, or manage-05 and manage-01 in xxx01?

Resolution:

The only connection between the xxx01 and the xxx10 libraries is ue_08. As long as you stop ue_08 when the xxx10 indexing jobs are running, there is nothing else you need to do.

You can run the xxx10 indexing jobs first or the xxx01 p_manage_05 and p_manage_01 jobs first; it doesn't matter.
