

## Problems setting up labels via BIAF software

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

I am facing problems with the new BIAF software to set a label for our needs. Basically the information I add in the template are not reflected when the print is made by ALEPH. All fields that I placed in the template are available in XML data so I don't know why the system is displaying something else.

### Resolution:

Please see attached documents.
