
ALEPH is not blocking users with debit from loaning

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
-

Description:

I followed the steps to set the automatic blocking of loans when the user is with a debt bigger than \$10. The setup I did in our test server is the following:

```
tab_block_circ
! 1 2 3 4 5 6
!
!!!!-!!-!!!!-!!-!!-!!!!!!
FHL ## ##### 10 10
```

```
tab_check_circ
lines added
```

```
LOAN-GBL check_circ_10_a
```

```
LOAN check_circ_9_a
LOAN check_circ_9_b
LOAN check_circ_10_b
```

Now when I try to loan the item barcode 00050701 to user ID ALBERTBLUE the system allows me to finish the transaction without any block/warning message.

Resolution:

It seems like this tab_block_circ (col. 6) and tab_check_circ (9a, 9b, 10a, 10b) should work, but, as described in KB 16384-75120, there's another way to do this: z305_cash_limit and tab_check_circ 5 / 5a.

[From site:] This z305_cash_limit with check_circ 5 / 5a worked.
