

## clear\_vir01 (hot) doesn't complete (still running after 3 hours)

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 19.01
- 

### Description:

We run clear\_vir01 (hot) every day at 4:05 AM and we noticed that it appeared to still be running this morning when the system was not allowing updates at around 8 AM.

### Resolution:

Stopping/restarting aleph corrected this problem.

I have created KB 16384-34577 with an analysis of this issue. As discussed there, we recommend running clear\_vir01 in cold mode.
