
p_cir_10 Exclude Parameter Generates date_x_n.gnt' Error

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

We would like to exclude two borrower statuses when generating patron courtesy notices via p-cir-10. If we specify "setenv p_bor_status_yes_no "N"" and setenv p_bor_status_filter "81 82" we get the following execution error:

```
Execution error : file '/exlibris/aleph/a18_1/aleph/exe/date_x_n.gnt'  
error code: 114, pc=0, call=1, seg=0  
114 Attempt to access item beyond bounds of memory (Signal 11)
```

Job Parameters (from /exlibris/aleph/u18_1/alephe/scratch/xxx50_p_cir_10.00892):

```
Fixed param: XXX50,divtest,N,81 82,Y,,002,00,N,1,N,N,3,01,  
setenv p_active_library "XXX50"  
setenv p_file_out "divtest"  
setenv p_bor_status_yes_no "N"  
setenv p_bor_status_filter "81 82"  
setenv p_item_status_yes_no "Y"  
setenv p_sub_library ""  
setenv p_days_before_due "002"  
setenv p_form_number "00"  
setenv p_auto_renew "N"  
setenv p_filter_type "1"  
setenv p_update_no_renewal "N"  
setenv p_email_only "N"  
setenv p_letter_type "3"  
setenv p_item_status_filter "01"
```

Can you tell us if there is another way to exclude two patron statuses when generating these notices?

Resolution:

The date_x_n.gnt error is generally caused by a date being zero when the program expects a non-zero. Perhaps when "except bor_status 81 or 82" is specified, a loan record is being processed which is not otherwise processed.

Try the following basic SQL check (the results for both statements should be "no rows selected"):

```
select z36_rec_key from z36 where z36_due_date = '00000000';  
select z36_rec_key from z36 where z36_due_date is null;
```
