## Change 035 Field Containing Old System Number

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

We want to move our old system number, currently in the 001 field to an 0359 field and replace it with the new Aleph system number.

What steps are required?

### Resolution:

This fix has 1 step in a generic\_fix file and 2 steps in the tab\_fix file.

First copy the old system number currently found in the 001 field to a new 0359a field.

```
ABC01/tab/import/fix001
```

```
1 001 COPY-SYSTEM-NUMBER 0359 ,L,a
```

Next place that fix in the ABC01/tab/tab\_fix file and add an additional step after it to overwrite the 001 field with the current system number. Note that the order is important here.

```
FX001 fix_doc_do_file_08 fix001
```

```
FX001 fix_doc_001 OVERWRITE
```

Once those files are ready and the pc\_server is restarted, run p\_manage\_37 with the FX001 fix on all the records, for example:

```
ABC01,DOC_LIST,,000000000,000324945,abmanage37,FX001,Y,MASTER,catname,00,
```

(keywords: manage\_37 p-manage-37)
