
Is the USR00 library needed?

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
-

Description:

We have changed our \$usr_library and \$pw_library in aleph_start from USR00 to our own library. This means that we don't need to have a USR00 library, correct?

Resolution:

We suggest, to avoid possible overlaying of your own patron or password data in the course of an upgrade, that USR00 not be specified as the usr_library or pw_library in aleph_start.

Nevertheless, USR00 is **always** used as the usr_library and pw_library for DEMO_LIBS libraries: usm50, uni50, etc. -- and the vir01 library. This is hard-coded in the programs. It needs to be there -- in the a-tree -- because, without it, you and we will be unable to log on to any of the USMnn libraries in the GUI for testing/comparison with your libraries.
