

Naming convention for z39_server logs

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 19.01
-

Description:

When the z39.50 server restarts, a date and time stamp is appended to the file name:

```
-rw-rw-r-- 1 aleph aleph 13516849 Dec 24 03:00 z39_server_9909.log.2412.0310
```

The format appears to be DDMM.HHMM.

Can this be configured to be YYYYDDMM.HHMM?

Resolution:

Yes, you can override the default naming convention of the server logs. It's done using `$aleph_proc/rename_server_log`, which is sourced in the various server startup procs - e.g., `$aleph_proc/z39_server`.

Additional Information

Change server log name
