
p_file_90: use last-order-number-mono (instead of last-order-number)

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

I notice that the orders created by file-90 are numbered sequentially, starting with number 1. It appears the service is utilizing last-order-number in util/g/2. Is it possible for file-90 to instead use last-order-number-mono (instead of last-order-number) when assigning order numbers?

Resolution:

p_file_90 calls the ./com/generic_loader_create_order program, which does:

```
MOVE "ORDER-SEQ" TO TAB-LOADER-DEF-FIELD-NAME(1).  
PERFORM GET-TAB-LOADER-DEF.
```

that is, it reads the ./xxx50/tab/tab_loader_def looking for an "ORDER-SEQ" label.

Then it does:

```
CALL "get_last_order_number" USING  
Z68-ORDER  
ORDER-SEQ
```

A sample tab_loader_def entry might be:

```
ORDER-SEQ ##### mono
```

This worked
