
p_manage_18; SET Z52_SEQUENCE; "ORA-01722: invalid number"

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

This is from the p_manage_18 log:

```
old 2: SET Z52_SEQUENCE = (SELECT MAX(Z00_DOC_NUMBER) FROM &&1..Z00)
new 2: SET Z52_SEQUENCE = (SELECT MAX(Z00_DOC_NUMBER) FROM ABC01.Z00)
SET Z52_SEQUENCE = (SELECT MAX(Z00_DOC_NUMBER) FROM ABC01.Z00)
*
```

ERROR at line 2:

ORA-01722: invalid number

and this SQL shows the problem:

```
SQL> SELECT MAX(Z00_DOC_NUMBER) FROM ABC01.Z00;
```

```
MAX(Z00_D
```

```
-----
```

```
?»¿030095
```

Resolution:

As described in KB 3961, the correct_last_doc_number proc resets the z52 (util g/2) last-doc-number value.

In this case the proc has found that the max z00_doc_number contains non-numeric characters.

See KB 16384-22993 for how to handle this situation.
