-

Description:

Where do the values of the \$1000, \$1100, \$1200, \$1300, and \$1400 placeholders in ./www_f_eng/item-hold-request-head (which appear on the Hold Request screen in the Web) come from?

Resolution:

The "Item is on an open shelf" in ./www_f_eng/item-hold-request-head is produced by this line in ./error_eng/check_hold_request:

```
6011 L Item is on an open shelf
```

"Item status: Regular loan (01) Call number: HP123 D45" in ./www_f_eng/item-hold-request-head is produced by this line in ./error_eng/check_hold_request:

```
6012 L Item status: $2 ($1) Call number: $3, $4
```

Variable \$1200, \$1300, and \$1400 are present in item-hold-request-head to accommodate other messages which *might* be generated by check_hold_request. For example, it can generate a 6014 message:

check_hold_request:

```
6014 L Item is expected
```

Additional Information

Knowledge article [What placeholders are available on an OPAC page?](#) is a general discussion where \$nn00 placeholder values come from.
