-

Description:

Does anyone know if it is possible to have separate pc_b_eng directories for different ADMs?

Resolution:

Yes, this is possible, using the pc_services_directory parameter:

```
setenv pc_services_directory $USER_MOUNT/xyz50
```

Then you would have different versions of pc_server_defaults (each with a different pc_services_directory):

```
pc_server_defaults.6515  
pc_server_defaults.6525  
pc_server_defaults.6535  
<etc.>
```

When users connect to port 6515, they use the pc_server_defaults.6515, which has the pc_services_directory ... xxx50 parameter.
