
ILL2 not properly handling requester alias on incoming new ill request

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

Problem Description:

If the requester ID is sent in lower case then the requester code & name are set to that of the responder.

Actual Results:

Requester ID is sent as fd:VDX-XSL then the requester code & name are set to that of fd:VDX-TST

Expected Results:

Request ID is sent as fd:VDX-XSL or FD:VDX-EXL then the requester code & name are set to that of FD:VDX-EXL

Resolution:

VDX created work around.
