

## Heading updates

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

My headings are not getting updates in my bibliographic library. My ue\_08 log states:

Warning (tab\_library\_group) : Invalid library in tab\_library\_group

and then

No connection - sleeping... (1)

The message keeps repeating itself

### Resolution:

This is because you have libraries in tab\_aut which are not in \$aleph\_libs, and also because you have libraries in \$alephe\_tab/tab\_library\_group which are not in \$aleph\_libs.

Therefore, via tab\_aut the system is looking for libraries when a heading is updated . It does not find them and then looks in \$alephe\_tab/tab\_io\_remote and still does not find them.

When the ue\_08 runs in the queue it looks in \$alephe\_tab/tab\_library\_group to see where to run, and again sees libraries defined in table which do not exist in \$aleph\_libs.

In short, you should not have libraries in any of the above tables which do not exist in \$aleph\_libs.

---

## Additional Information

ue\_08, tab\_library\_group, tab\_aut
