## How to Change the Library and Database Names in Voyager WebVoyage OPAC

- **Article Type:** General
  - **Product:** Voyager
  - **Product Version:** 7.0.1
- 

Desired Outcome Goal:

Change the library / database name

Procedure:

Edit library/database name in 3 places:

1. System Administration > Search > Database Definitions > LOCAL > Name:
2. On server, /m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/ui/<skin>/webvoyage.properties
  - a. "Connections" section > [connect.db.LOCAL.name](#)=
  - b. "Connections" section > [connect.db.groupN.LOCAL.name](#)=

NOTE: The best approach is to consistently name the local database in all these places.

---

### Additional Information

How settings above display:

1. Search and Titles List pages show value in [connect.db.LOCAL.name](#)

UNLESS

LOCAL is defined in a remote search group, at which point displays [connect.db.groupN.LOCAL.name](#).

2. Record detail page holdings jump bar ("Held at:") will display SysAdmin "Name" field for the LOCAL db

UNLESS

LOCAL db is defined in a remote search group, at which point it will display the first occurrence of the [connect.db.groupN.LOCAL.name](#).
