

Displaying multivolume sets in ascending order

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

In the Web Holdings Detail both the periodicals and the multivolume monographs (such as encyclopedias) display in descending order. We would like the multivolume monographs to be in ascending order

Resolution:

This is controlled by the `./xxx01/tab/tab_z30_sort`.

Change column 4 in your WWW-A line to "A".

For instance, if you have:

WWW-A D 00 D 00

you would change it to:

WWW-A D 00 A 00

Additional Information

Web Holdings Detail, multivolume sets, order
