
Apache with SSL not working after applying revision 3.13

- **Article Type:** General
 - **Product:** MetaLib
 - **Product Version:** 3
-

Description:

Apache with SSL not working after applying revision 3.13/ User information not transferred to MetaLib when using SSL

Resolution:

After upgrading to Revision 3.13, check that the PDS_PORT and PDS_PORT_IN definitions use the correct SSL port as follows:

As the "metalib" user within a server SSH session:

- 1) within the ./metalib_conf/metalib_start directory, change if necessary the relevant PDS_PORT and PDS_PORT_IN parameters to the SSL PORT and save the file
 - 2) issue the command "source metalib_start"
 - 3) issue the command "metalib_conf_create" to create a new metalib.conf file with the new metalib_start parameters included
 - 4) issue the command "start_w" to restart the Web servers and allow the new metalib.conf to be taken/read
