
Number of characters in Column 5, tab_sub_library.eng

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

We have a slightly longer sub library name (34 characters including spaces) that does not fit in Column 5 (30 maximum) in tab_sub_library.eng.

Can this be increased?

Resolution:

A change to such a central Aleph table would be made only between versions. If we were to make this change in, say, version 18, *all* of the version 18 customers would need to change the columns in their tab_sub_library's at the time of this Service Pack so the program could read them properly.

Surely you can find a way to abbreviate the sublibrary name from 34 to 30 characters....
