## Should EXT01 have tables defined?

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

You see these errors in the www\_server log when trying to access a database via z39.50 through the ALEPH OPAC:

Oracle error: update\_cursor z52  
ORA-00942: table or view does not exist

tab\_base.eng shows EXT01 as the "Library connected to"....

Should the EXT01 have a z52 table defined? (It doesn't have any tables defined.)

### Resolution:

The EXT01 and EXT02 are "virtual libraries"; they don't, and aren't supposed to, have any Oracle tables.

The tab\_base.eng column 7 ("Library connected to") value needed to be moved one position to the right; it was looking for "XT01 " as the library instead of "EXT01".
